

Train coupling tutorial by sputnik\_1 (not valid for BigBoys trains!)

Step 1: Get in the loco, start the engine, push F7 to engage the coupling in the back, hold Ctrl+F7 to shorten the coupling

Step 2: Slowly reverse the loco, the coupling will attach to the wagon when you are near

Step 3: Stay in the loco! Zoom out using the 3-button on your numpad until you have a similar view as on the picture above. Slowly reverse the loco until both wagons have contact. Look out for the small button with one (1) on it (on Sgnss silver lever). Hold your mouse above it and press and hold the left mouse button. Move the mouse gently above it, still having pressed the left mouse button. When you are at the right spot, a blue line should appear. Keep the left mouse button pressed!

Step 4: Slowly move your mouse down. The small button will move down and the blue line gets longer (see picture above). If you did everything correctly, the coupling should attach to the first wagon.

Step 5: Repeat steps 3 and 4 to couple more wagons!
